

Pilosella peleteriana (Mérat) F. Schultz & Schultz Bip.

Key:
Dots refer to the native sites of the species
Numbers refer to the nearby Botanical Collections

Starting references

Family

Asteraceae

IUCN category

Vulnerable

Habit

Herb (perennial).

Habitat

Slopes in chalk and limestone grassland, rock shelves, quarry waste, shallow soils overlying granite, dunes

Distribution in wild

Country	Locality & Vice County	Sites (10km ² occurrences)	Population (plants)
Wales	Craig Breidden, Montgomeryshire	1	
England	Dorset	4	
	I of Wight	1	

Ex situ Collections

Gardens close to the region of distribution of the species

- 1 Treborth Botanic Garden
- 2 Bodnant
- 3 Abbotsbury Subtropical Garden
- 4 Ventnor Botanic Garden

Gardens with specialisation on family Asteraceae or genus *Pilosella*

None

Potential to grow the species in *ex situ* Collections

In cultivation it is attractive to slugs, which in spring keep the plants well in check and might destroy them entirely if not controlled (British RDB, 1999).

Conservation information

Linkages to BAPs
